

Looking for a new way to manage your depression?

If yes, this study may be for you.

RENEW-MDD-1 is a clinical research study for adults with major depressive disorder (MDD) who are taking a treatment that is helping manage their symptoms.

Everyone who takes part will continue taking their current treatment. They will also take placebo or investigational drug (the one being tested).

This study will test if the investigational drug, together with the current treatment, is safe and can help people with MDD stay well for longer.

You may be able to join if you meet these criteria:

- Aged 18 to 75 years
- Diagnosed and taking treatment for major depressive disorder (MDD)
- Currently, your symptoms of depression are improved or well-controlled
- Body mass index (BMI) of at least 22

Additional criteria will apply. If you have any questions, please talk with your doctor.
